PROFESSIONAL EXPERIENCE

WEB DEVELOPER AS A FREELANCER

May '20 - Present

DIGITALZILLAS

Bangalore, IN

- **Project:** PHM (Population Health Management)
- **Role:** Handel Frontend & Backend
- **Description:** Population health management (PHM) refers to a concentrated holistic approach to improving the patient health outcomes of a group of individuals. The move away from patient fee-for-service to a value-based model has made managing population health the focus for most Accountable Care Organizations (ACO), insurance providers, quality improvement agencies, health care systems, and health care providers as they strive for the provision of quality care at less cost. PHM involves applying public health concepts to chronic disease management with a comprehensive data analysis. The information gathered can assist in finding and filling patient care gaps and developing actionable treatment steps to care for individual patients.
